COMMUNICATION

Project Name: EduGenie

Project Type: AI-Powered Learning Assistant

Technology: Google Gemini Generative AI

1. INTRODUCTION

Effective communication is an important part of successfully demonstrating the EduGenie project.

The communication plan focuses on explaining the project problem, proposed solution, features, technology, working process, and expected benefits in a clear and understandable manner.

2. COMMUNICATION OBJECTIVES

The main objectives of project communication are:

- Clearly explain the purpose of EduGenie.
- Describe the problem addressed by the project.
- Explain how the proposed solution works.
- Demonstrate the major functional features.
- Explain the use of Google Gemini Generative AI.
- Present the project results clearly.
- Answer questions from the audience.

3. PROJECT INTRODUCTION

During the demonstration, the project can be introduced as follows:

"EduGenie is an AI-powered learning assistant designed to help students understand educational content more easily. It uses Google Gemini Generative AI to process user input and generate simple, useful, and understandable learning responses."

4. PROBLEM COMMUNICATION

The project presentation should explain that students may face difficulties when:

- Understanding complex educational topics.
- Processing lengthy study materials.
- Identifying important information.
- Getting quick clarification while studying.
- Revising large amounts of content.

EduGenie addresses these challenges by providing AI-powered educational assistance.

5. SOLUTION COMMUNICATION

The proposed solution can be explained using the following flow:

Student

↓

Enter Educational Content / Question

↓

EduGenie

↓

Google Gemini AI

↓

Generate Learning Response

↓

Display Response

↓

Student Learning / Revision

6. FEATURE COMMUNICATION

The major features should be explained clearly during the demonstration:

- User input
- AI-powered content processing
- Content summarization
- Simple explanations
- Important point extraction
- Question and answer support
- AI response generation
- Response display
- Error handling

7. TECHNOLOGY COMMUNICATION

The main technology used in the project is Google Gemini Generative AI.

The project presentation should explain that Gemini is used to process student input and generate relevant educational responses.

The Gemini API provides communication between the EduGenie application and the AI model.

8. DEMONSTRATION COMMUNICATION

During the live demonstration, the presenter should explain each step while performing it.

Recommended sequence:

1. Introduce EduGenie.
2. Explain the problem.
3. Explain the proposed solution.
4. Open the application.
5. Enter sample educational content.
6. Submit the request.
7. Explain the AI processing.
8. Display the generated response.
9. Explain how the response supports learning.
10. Demonstrate another feature if required.

9. AUDIENCE INTERACTION

The presenter should communicate with the audience throughout the demonstration.

Possible questions from the audience may include:

- What problem does EduGenie solve?
- How does EduGenie use Gemini?
- What are the main features?
- How does the application process user input?
- Can more features be added in the future?
- How can the system help students?

10. ANSWERING QUESTIONS

Questions should be answered clearly and based on the implemented project.

If a feature is planned for future development, it should be clearly identified as a future enhancement rather than presented as an existing feature.

11. PRESENTATION SKILLS

The project demonstration should focus on:

- Clear speech.

• Simple explanations.

• Good understanding of the project.

• Proper time management.

• Confidence while explaining the system.

• Effective interaction with the audience.

• Clear explanation of technical concepts.

12. COMMUNICATION MATERIALS

The following materials can be used during the demonstration:

• Project presentation slides.

• Application screenshots.

• System architecture diagram.

• Project workflow diagram.

• Live application demonstration.

• Sample input and output.

13. KEY MESSAGE

The main message of the presentation is:

"EduGenie uses Generative AI to provide students with simple, quick, and useful learning assistance, helping them understand and revise educational content more effectively."

14. CONCLUSION

Effective communication helps the audience understand the purpose, functionality, technology, and benefits of EduGenie.

A clear project demonstration combined with simple explanations allows the audience to understand how EduGenie works and how the proposed solution can support student learning.
