SAMPLE PROJECT DEMONSTRATION

Project Name: EduGenie

Project Type: AI-Powered Learning Assistant

Technology: Google Gemini Generative AI

1. INTRODUCTION

The Sample Project Demonstration explains how the EduGenie application can be presented and demonstrated to users.

The demonstration focuses on the main workflow of the application, from entering educational content to receiving an AI-generated learning response.

2. DEMONSTRATION OBJECTIVE

The main objectives of the demonstration are:

- To introduce the EduGenie application.
- To demonstrate the main features of the system.
- To show the integration of Google Gemini Generative AI.
- To demonstrate how students can use EduGenie for learning.
- To show the complete user-to-AI response workflow.

3. DEMONSTRATION SETUP

The following resources are required for the demonstration:

- EduGenie application
- Computer or laptop
- Internet connection
- Required project dependencies
- Gemini API configuration
- Sample educational content

4. DEMONSTRATION FLOW

The demonstration follows these steps:

Step 1: Launch EduGenie

Open and start the EduGenie application.

Step 2: Introduce the Application

Briefly explain that EduGenie is an AI-powered learning assistant designed to help students understand educational content.

Step 3: Enter Learning Content

Enter a sample educational topic, question, or study material into the application.

Step 4: Submit the Request

Submit the entered content for AI processing.

Step 5: AI Processing

EduGenie sends the request to Google Gemini through the Gemini API.

Step 6: Generate Response

Google Gemini analyzes the input and generates an appropriate educational response.

Step 7: Display the Response

The generated response is displayed through the EduGenie interface.

Step 8: Explain the Result

Demonstrate how the student can use the generated response for learning and revision.

5. SAMPLE DEMONSTRATION SCENARIO

Example Input:

"Explain photosynthesis in simple terms."

Expected Output:

EduGenie provides a simple and understandable explanation of photosynthesis that is suitable for learning and revision.

The demonstration can then show how the same system can be used with different educational topics or questions.

6. FEATURES TO DEMONSTRATE

The following features can be demonstrated:

- User input
- AI-powered content processing
- Content summarization
- Simple explanations
- Important point extraction
- Question and answer support
- AI response generation
- Response display
- Error handling

7. DEMONSTRATION SCRIPT

The project presentation can follow this sequence:

1. Introduce the problem faced by students.

2. Explain the purpose of EduGenie.

3. Introduce the main features.

4. Launch the application.

5. Enter sample educational content.

6. Submit the request.

7. Show the communication with the AI service.

8. Display the generated response.

9. Explain how the response helps students.

10. Conclude by discussing future enhancements.

8. EXPECTED DEMONSTRATION RESULT

The demonstration should show that:

- The application starts successfully.
- Students can enter educational content.

• The system processes the input.

• Google Gemini generates an appropriate response.

• The response is displayed clearly.

• The application supports learning and revision.

9. DEMONSTRATION EVIDENCE

The following evidence can be included in the project documentation:

• Application home screen screenshot.

• User input screenshot.

• AI-generated response screenshot.

• Feature demonstration screenshots.

• Final application output screenshot.

10. CONCLUSION

The Sample Project Demonstration provides a practical overview of how EduGenie works.

By demonstrating the complete process from user input to AI-generated educational output, the project presentation can clearly show the functionality and usefulness of EduGenie as an AI-powered learning assistant.
